The problem — users don't have *control*

In a world dominated by digital data, it's still too hard to sort, search, and share images on your phone.

Sort

Search

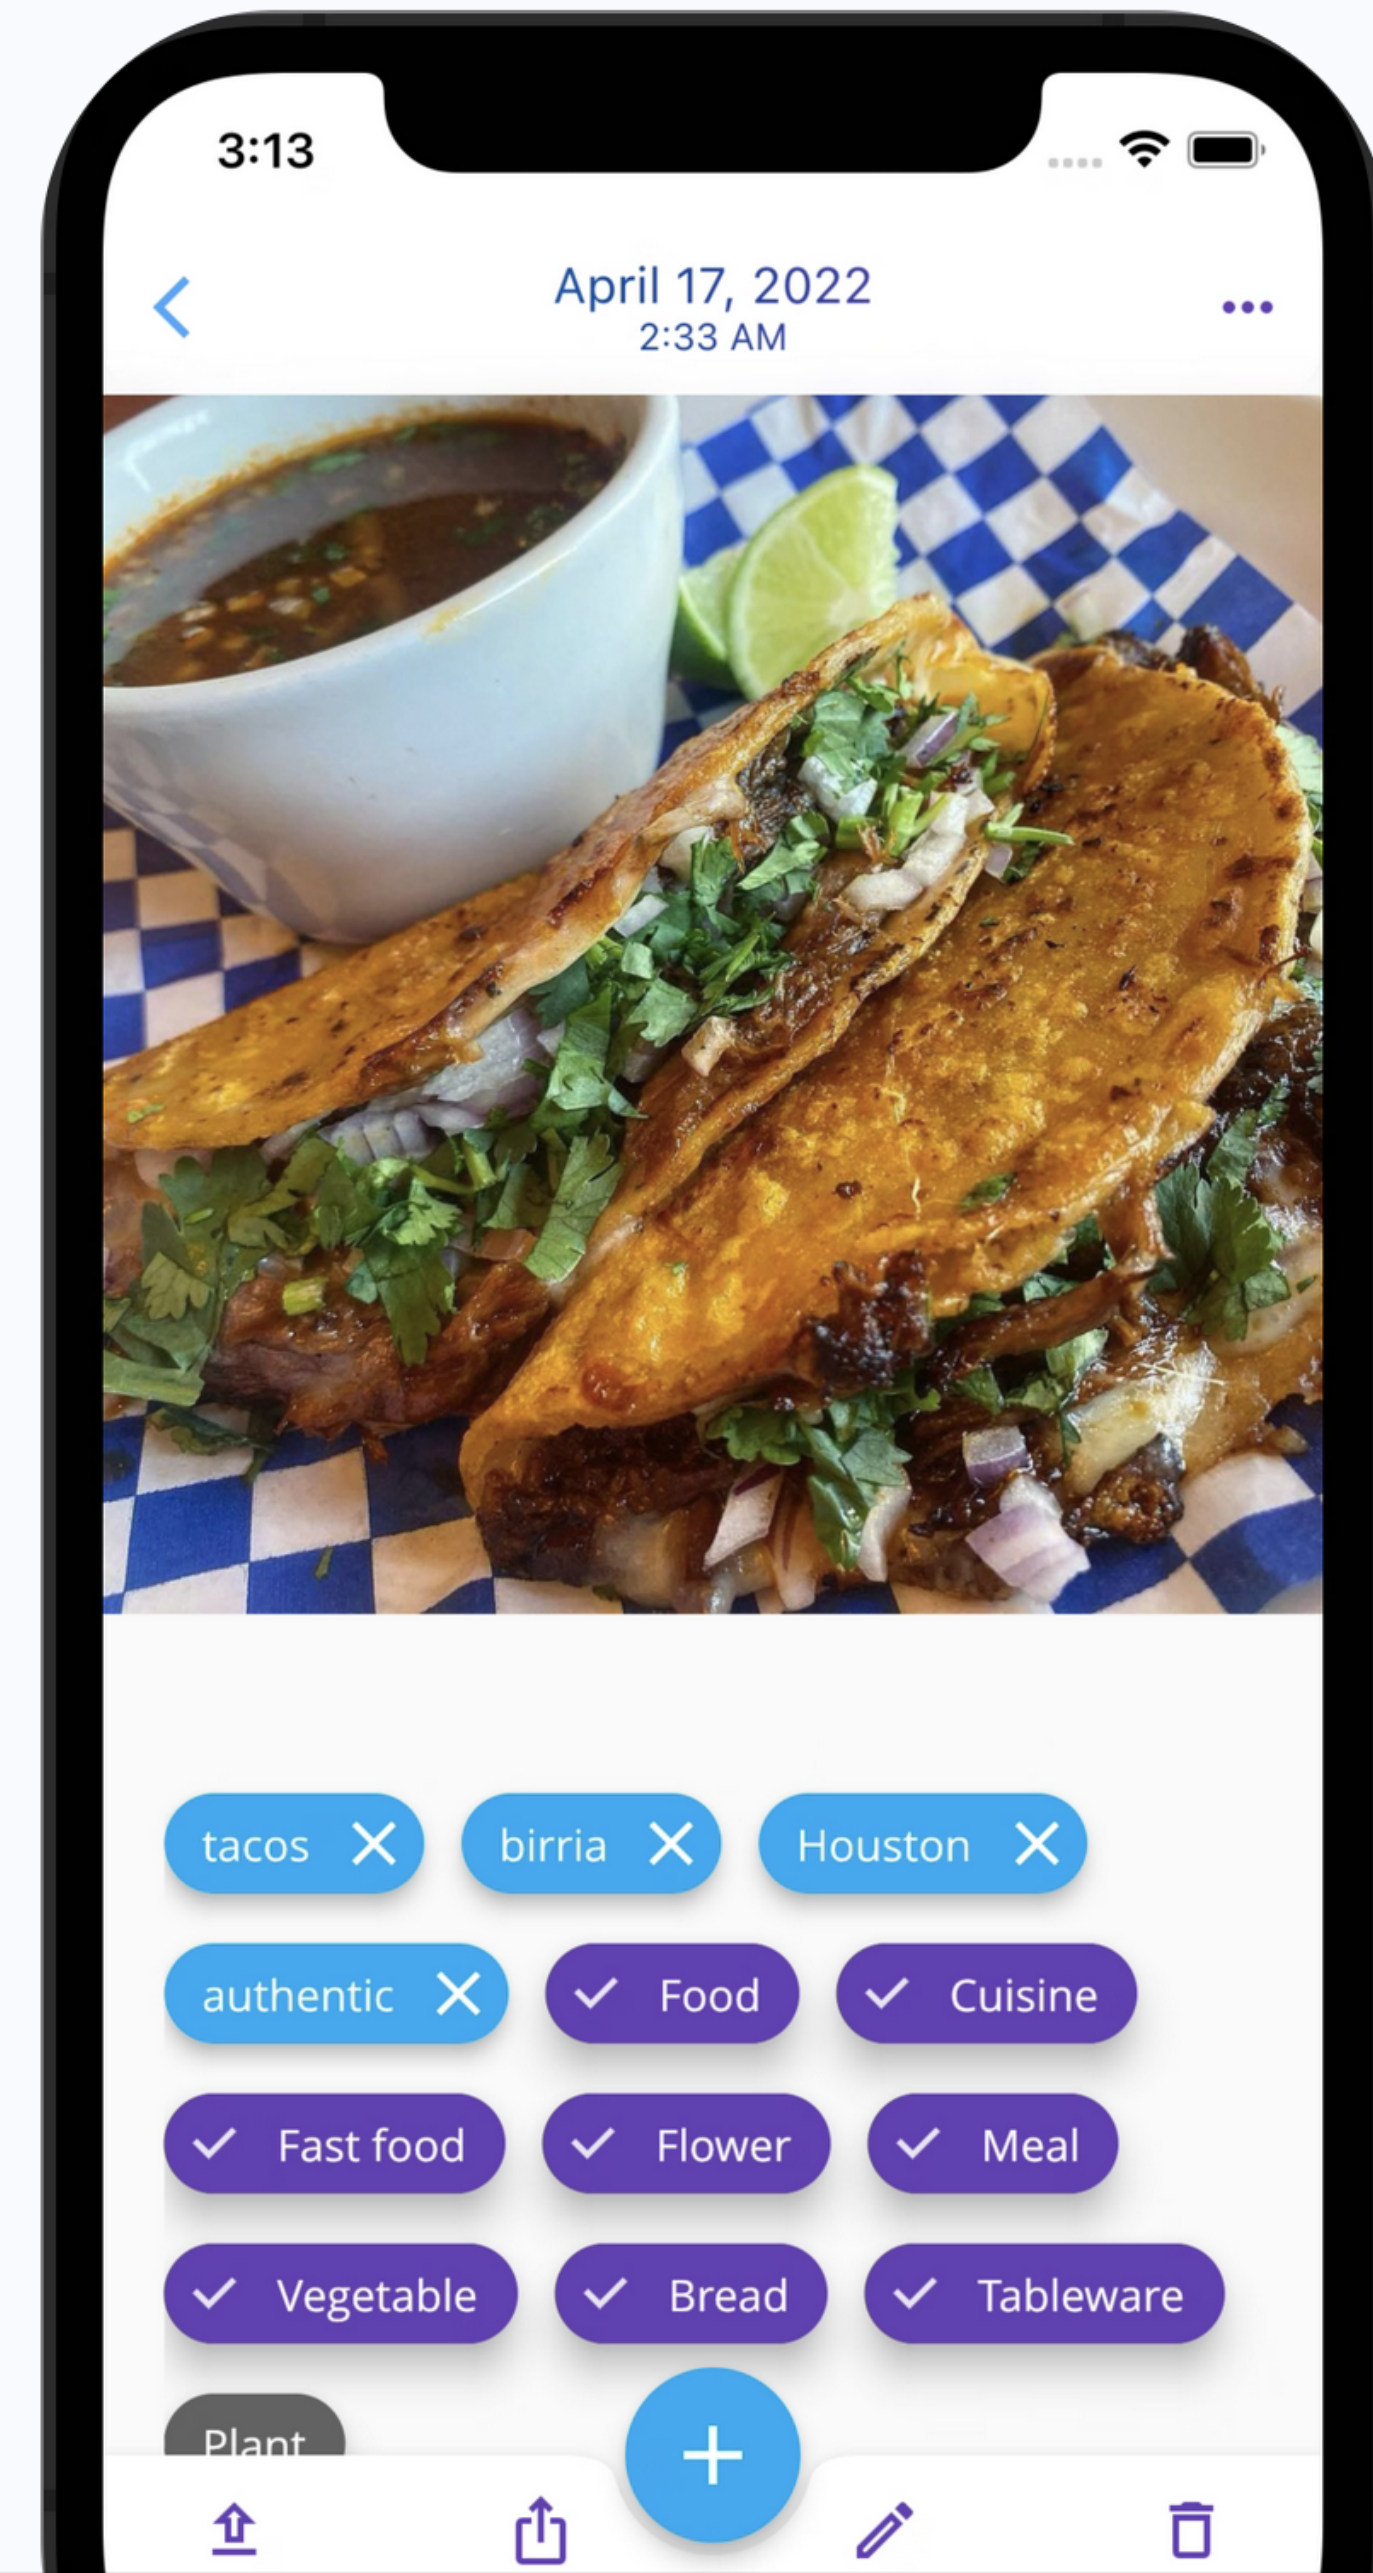

Share

Our solution — make photo organization *easy*.

We let users *sort* through elegant photo tagging and autogenerated albums.

We let users *search* with intelligent image filtering and state-of-the-art machine learning.

We let users *share* through in-app messaging and user-to-user image tag transfer.

Introducing PicTag

This app revolutionizes the way you manage photos.

Sometimes, there isn't always an "app for that." Mobile users have been scrolling through their camera roll for years - our fingers are tired! PicTag changes that.

- Users can add personalized tags to their pictures, which are indexed and sorted into albums for searching, sharing, and filtration.
- Our powerful image processing network, coupled with transfer learning, makes automatically generated tags visible and editable to the user.
- The in-app messaging feature and social media feed support sharing images with their associated tags - you'll never lose a group photo again!

Market Size

Millions of photo sharing, storing, and messaging apps congest the App Store. PicTag is **all-in-one**.

- TAM - Worldwide mobile app users (5.31 billion)
- SAM - Mobile users with photo management needs
- SOM - Mobile users with photo management needs whose switching costs are low

Photographic Services: \$44.07 billion*

Active Social Media Users: 4.2 billion

Google Photos Users: 1 billion

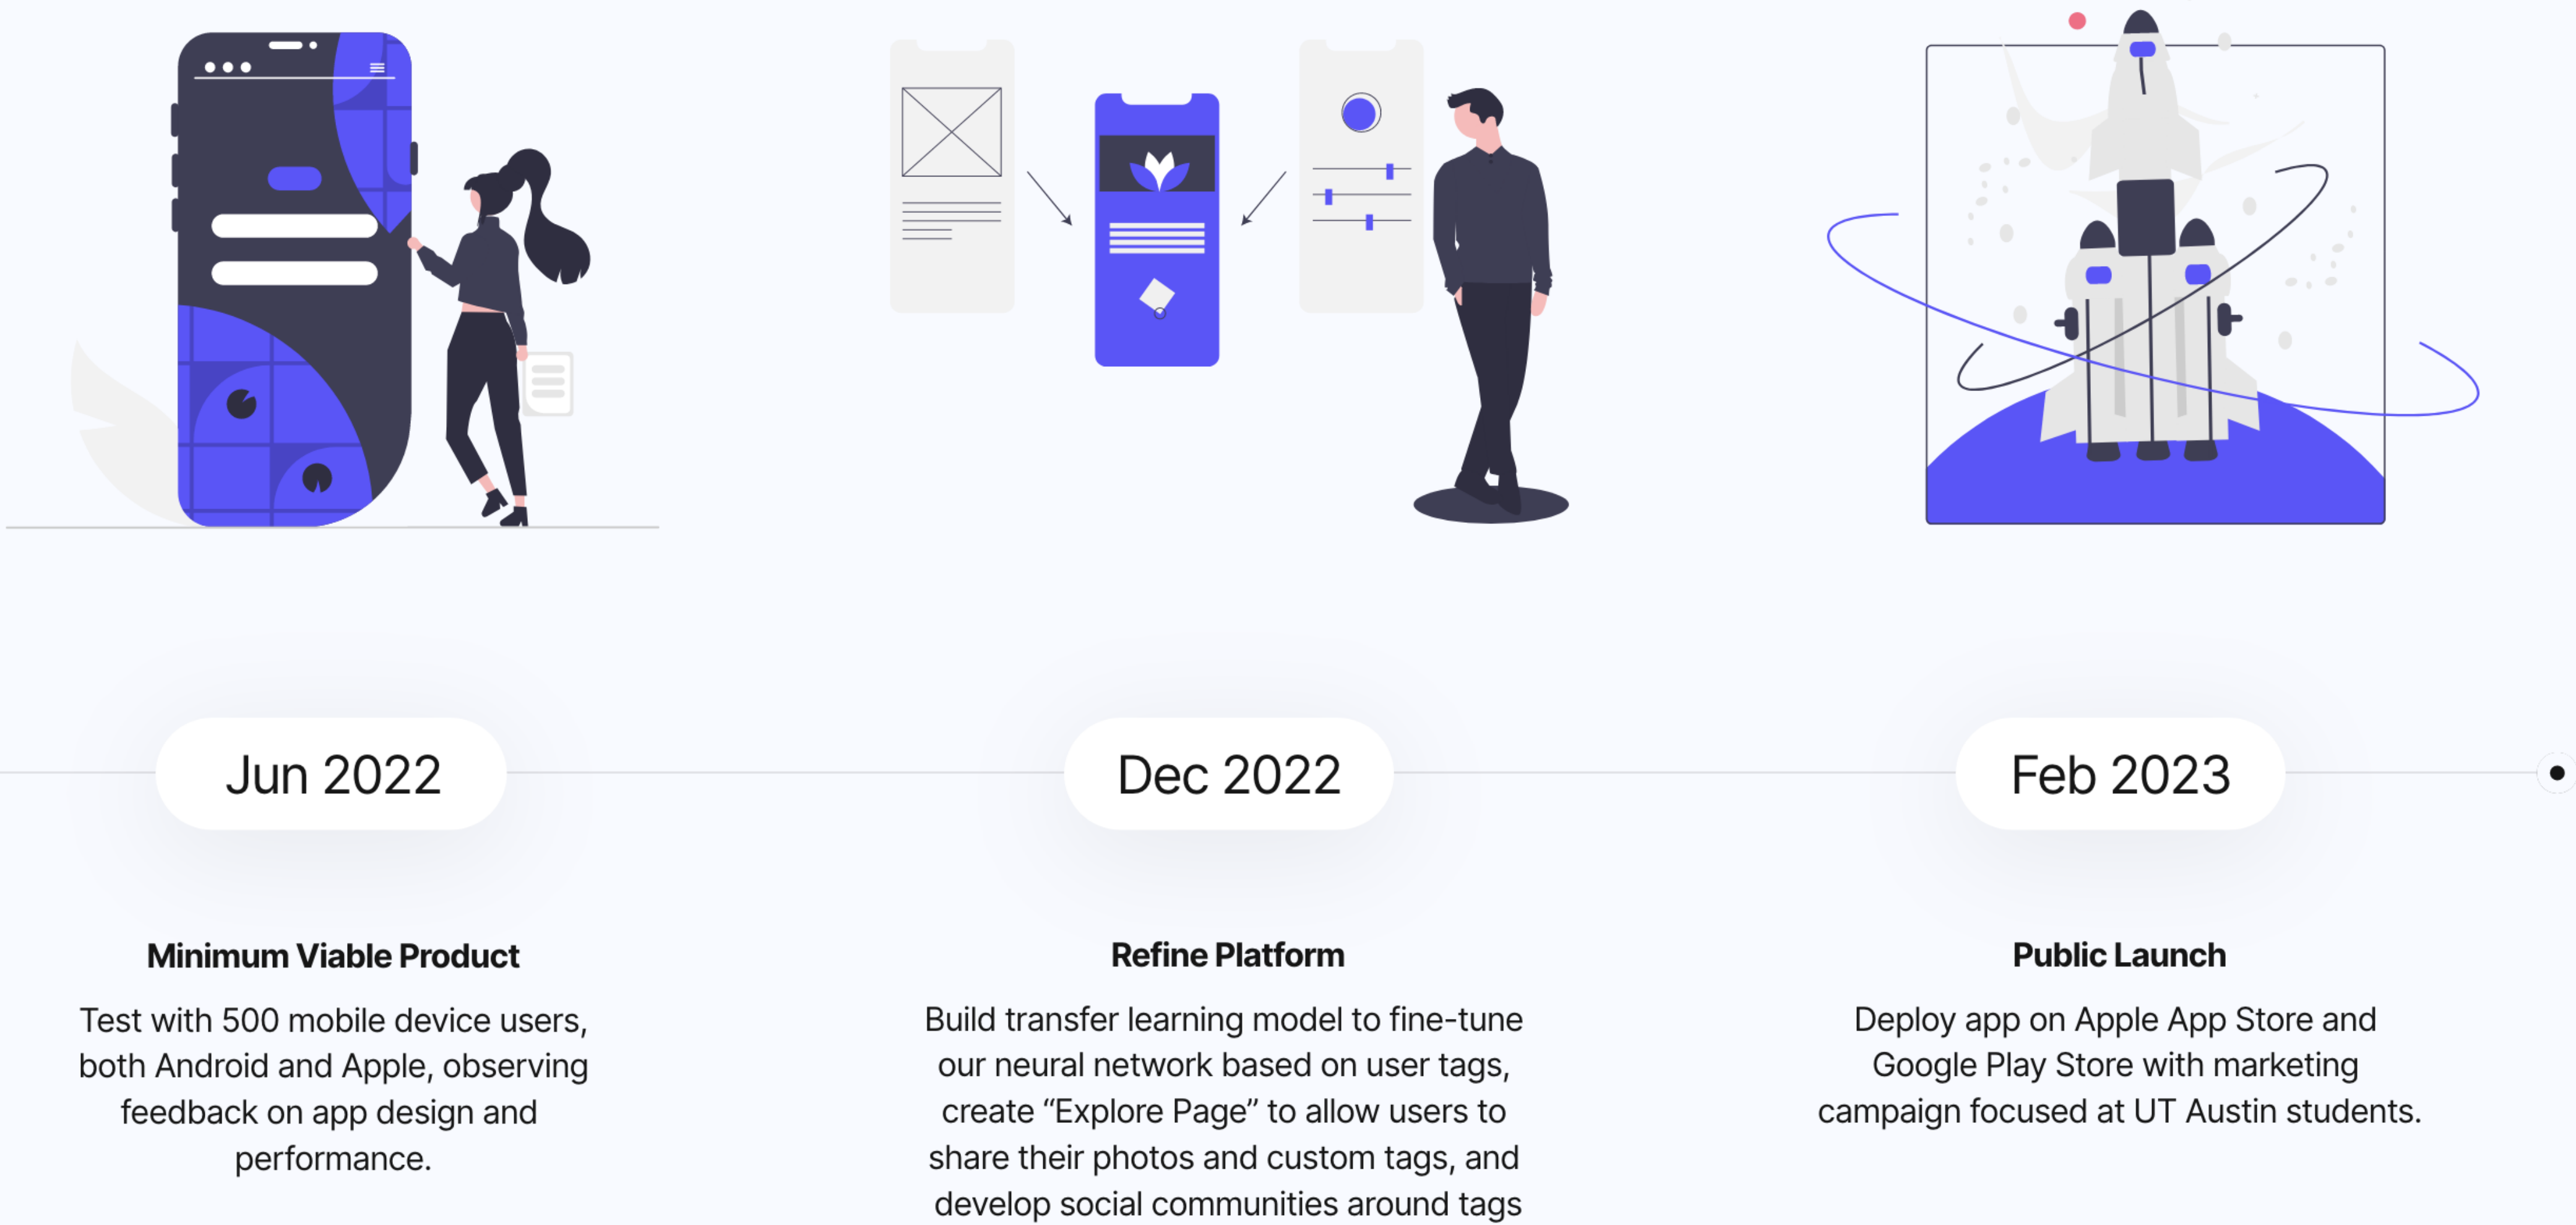

Competition and Why We're Different

Manual Photo Tagging and Filtering				
Automatic Photo Classification				
Public Photo Gallery				
Sharing Captioned Photos				

Go-To-Market Timeline

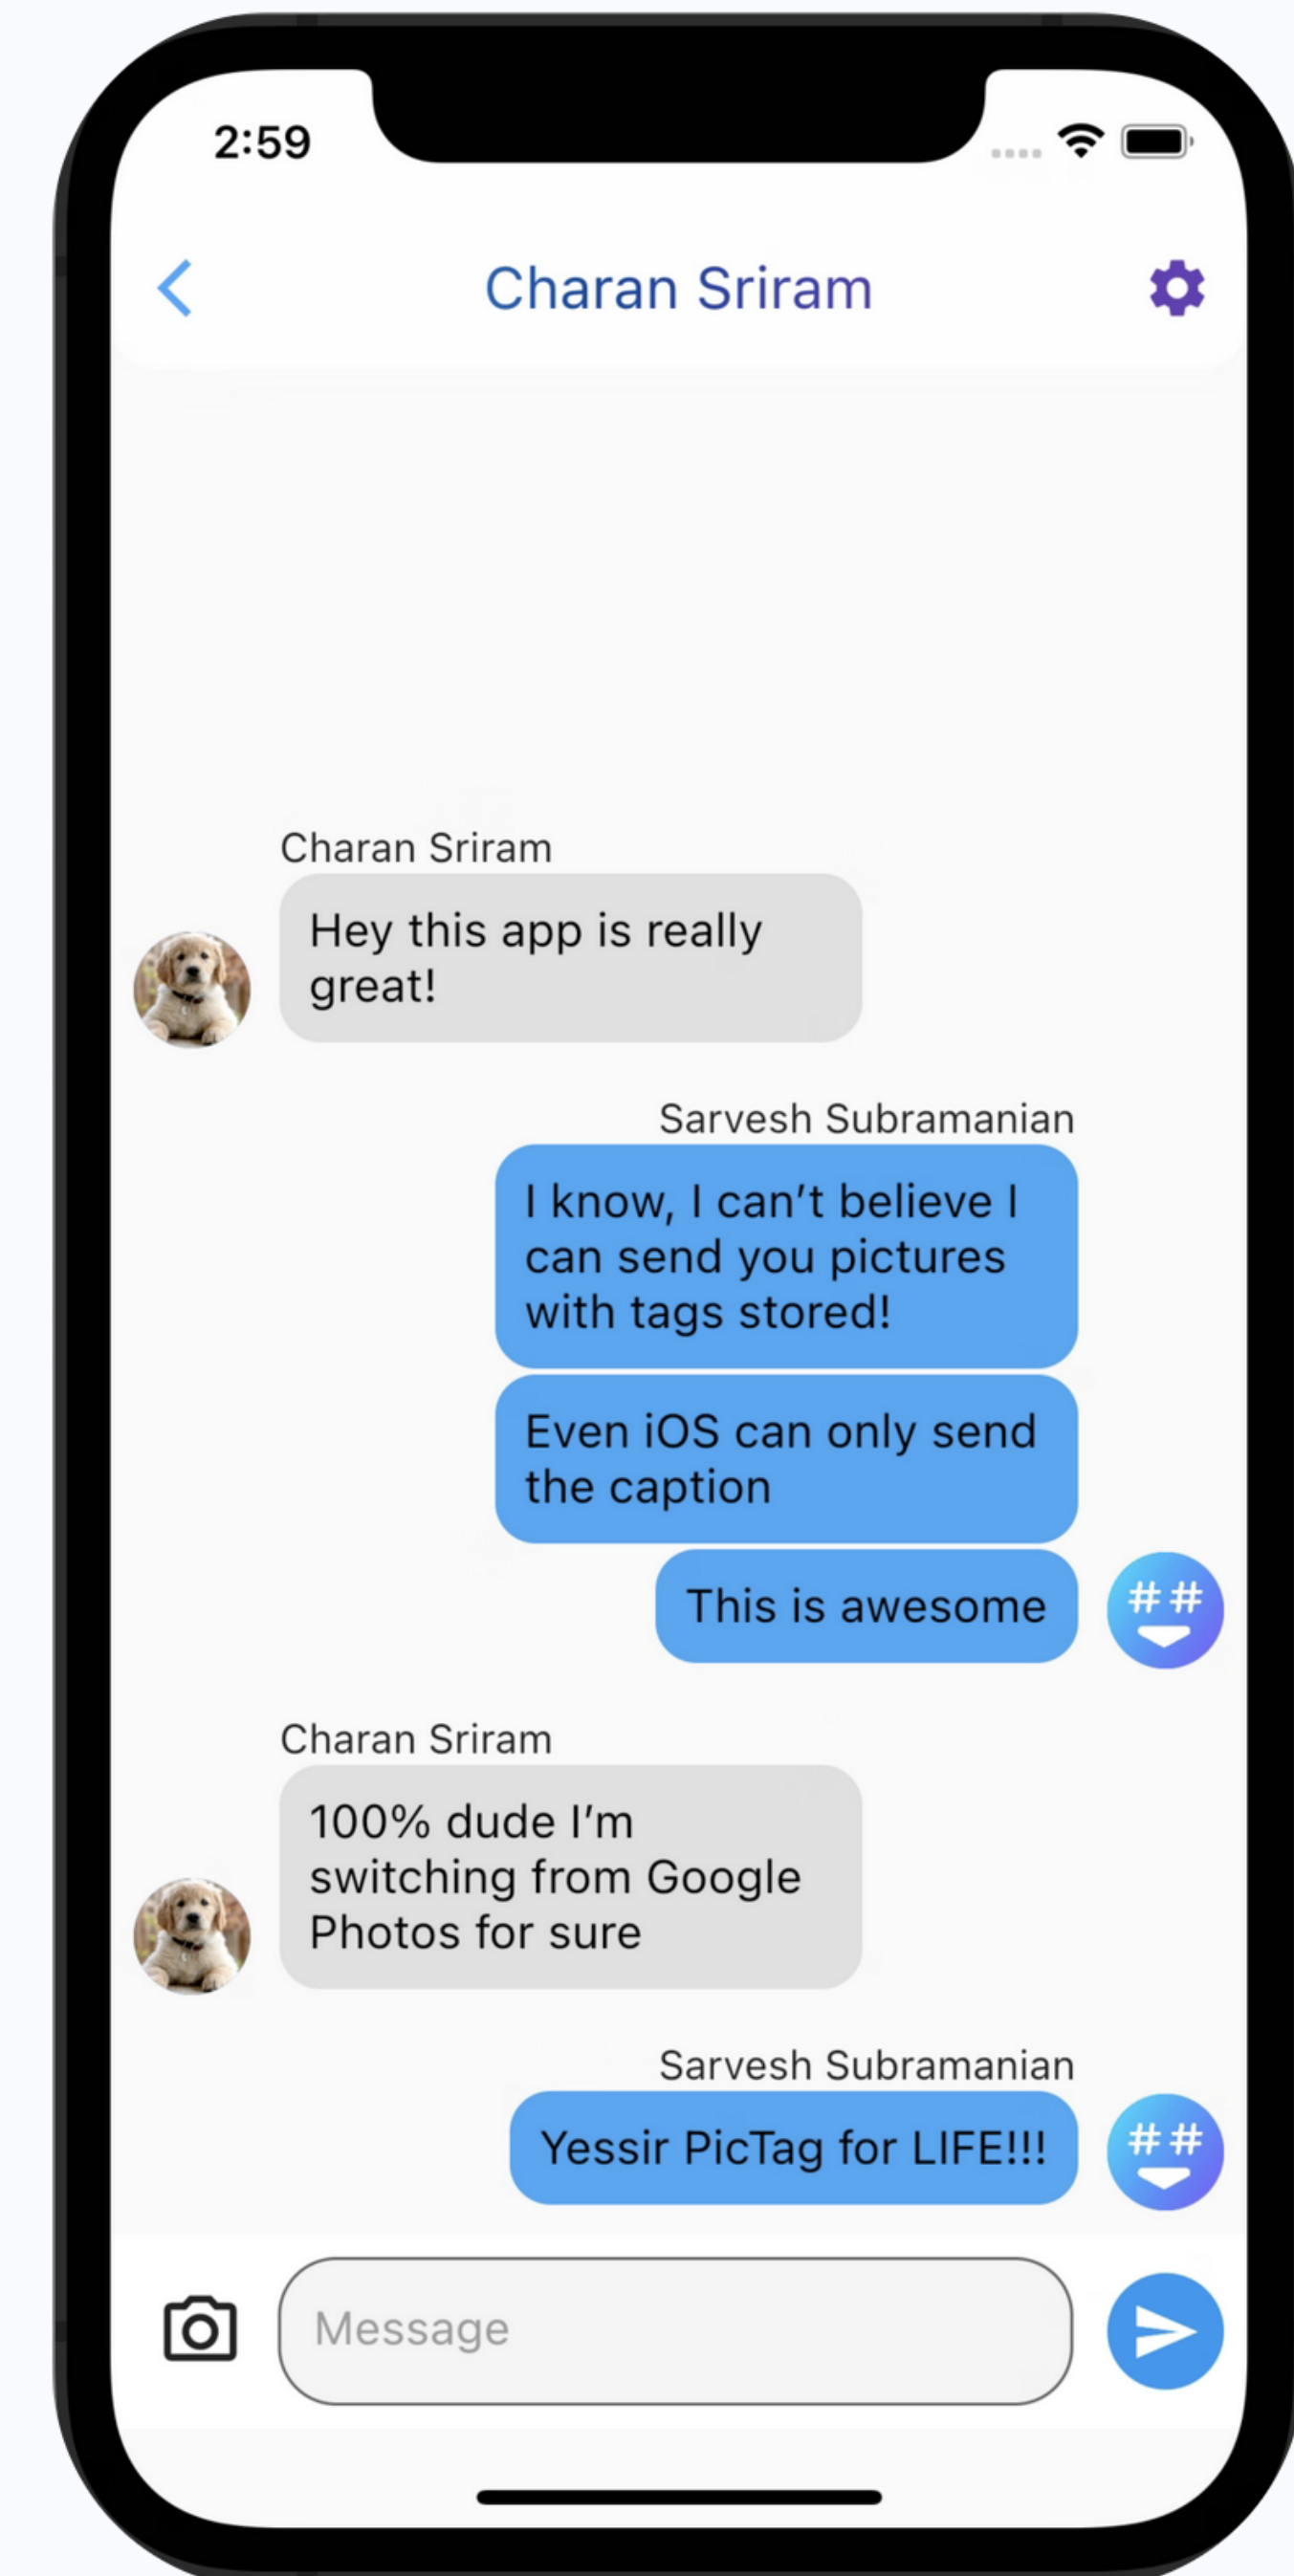

Business Model

AI as a Service

- Build up intelligent image-tagging neural network based on crowdsourced image classification (custom tags)
- Sell image processing services as an API to industries (real estate, marketing, etc.)

Advertising

- Benefit from strong network effects to acquire new users through PicTag image sharing and integration with native messaging
- Set up ad support to intersperse advertisements within PicTag social media feeds

Tech Uniqueness

Crowdsourced AI

- **Users make the app better.**
- One of the largest hurdles in image classification is getting labeled images. While PicTag offers a fresh photo management service to users, PicTag users also heavily contribute to our model's accuracy through the custom user tags, solving the lack-of-labeled-images issue with crowdsourced labeling.
- All PicTag users have *full control* over their privacy and can choose whether or not an image interfaces with the PicTag cloud.

A Picture is Worth a Thousand Words

- **Image recognition is a booming market.**
- The image recognition market is expected to grow to \$109.4 billion at a CAGR of 18.8%, a sign of *immense* growth in the industry.
- PicTag's model, with the help of user tags, has a competitive advantage over other image classification models due to its specificity. Real estate, automotive, and e-commerce industries (to name a few) could benefit from our powerful model for automated inventory and accurate description-making for products.

Financial Information

Plan Going Forward

Launch app by October and begin UT marketing campaign

Hires

ML Engineers and student ambassadors

Goals

Acquire 1,000 active daily users

Begin adding layers to image classification model

Develop income stream from advertisements and partnerships

Costs

Our team has strong experience in machine learning, app dev, and database management.
More importantly, our team genuinely *enjoys* working on the product.
